

MENOPAUSE AND CANCER MULTI-ORG SESSION

MENOPAUSE AND CANCER - 15TH MAY 2025 - 12PM-1PM

With cancer treatment often triggering menopause, 40% of women under 40 and 70%-90% of women over 40 enter permanent menopause as a result of their treatment.

Many people say that navigating menopause after cancer feels harder than chemotherapy, radiotherapy, and surgery altogether.

Whether you are experiencing this yourself, supporting someone else going through treatment or wanting to learn more to support people across your organisation, this session is for you.

We are delighted to be joined by Rachel Bowman, Director of Menopause and Cancer to talk about the impact this could be having for people in your organisation and how people can best be supported. The session will include:

- why do we need to understand about menopause and cancer
- key facts to understand
- the potential impact cancer treatment can have on menopause and why menopause after cancer is different/more complex and how these can recur in people who have had cancer
- the challenges people face and accessing support and treatment
- shared personal work experience of returning to a corporate leadership role after treatment and navigating a medical menopause
- what organisations can do to best support people
- Menopause and Cancer: our mission and how we can support you

Providing the opportunity for organisations to come together to access this session on such an important topic.
